VITAL STATISTICS OF THE UNITED STATES, 1963

VOLUME III—MARRIAGE AND DIVORCE

A brief summary of the contents for each section is listed below for the convenience of the reader. A complete table of contents is shown at the beginning of each section and is identified by a narrow black edge which can be located easily by fanning the pages. Each section is paged independently, using the section number as the identifying prefix.

Section 1. Marriages

For the United States:

- National trend data.
- Marriage totals and rates for each State, division, and region.
- Marriage totals for each county or county equivalent.
- Monthly marriage totals for each State, division, and region.

For the marriage-registration area:

- Marriages classified by major demographic characteristics of bride and groom and by characteristics of marriages performed in each participating State; marriage rates specific for sex, age, and marital status.

Section 2. Divorces

For the United States:

- National trend data.
- Divorce totals and rates for each State, division, and region.
- Divorce totals for each county or county equivalent.
- Trend of national totals of children involved in divorce.

For the divorce-registration area:

- For each participating State, divorces classified by major demographic characteristics of husband and wife, characteristics of their marriage, number of children, and legal items.

Section 3. Puerto Rico and Virgin Islands (U.S.)

- Marriage and divorce totals for each county or county equivalent.
- Marriages classified by major demographic characteristics of bride and groom.
- For Virgin Islands only, divorces and annulments classified by characteristics of husband and wife, duration of marriage, and legal items.

Section 4. Technical Appendix

- Historical and contemporary sources of marriage and divorce statistics, design of the samples of marriages and divorces and annulments, variability of sample estimates, and uniformity and completeness of the reporting forms and the collected data. Tables of the population estimates used as bases for rates.

Section 1. Marriages

Table	Page
1-1. Estimated number of marriages and marriage rates with percent changes from preceding year: United States, 1920-63, and marriage-registration area, 1957-63-----	1-5
1-2. Estimated marriage rates per 1,000 unmarried women 15 years of age and over and 15-44 years of age: United States, 1940-63-----	1-5
1-3. Estimated number of marriages and marriage rates by month, with and without seasonal adjustments: United States, 1954-63-----	1-6
1-4. Marriages and marriage rates: United States, each region, division, and State, 1959-63-----	1-7
1-5. Marriages by month: United States, marriage-registration area, each region, division, and State, 1963----	1-8
1-6. Marriage rates by previous marital status and age: Marriage-registration area, 1963-----	1-9
1-7. Median and first and third quartiles of age at marriage for brides and for grooms by previous marital status of each partner: Marriage-registration area, 1963-----	1-9
1-8. Median and mean age of bride and of groom, by specified age of spouse at first marriage of both: Marriage- Marriage-registration area, 1963-----	1-10
1-9. Percentage distribution of marriages by previous marital status of bride and of groom: Marriage-registration area and each registration State, 1963-----	1-10
1-10. Percentage distribution of marriages by marriage order of bride and of groom, by color: Marriage-registration area and each registration State, 1963-----	1-11
1-11. Percentage distribution of marriages by month marriage performed, by marriage order and color of bride and of groom: Marriage-registration area, 1963-----	1-12
1-12. Percentage distribution of marriages by resident status of bride and of groom in State where married: Marriage-registration area and each registration State, 1963-----	1-13
1-13. Percentage distribution of first marriages and remarriages by type of ceremony performed, by age of bride and of groom: Marriage-registration area, 1963-----	1-14
1-14. Percentage distribution of first marriages and remarriages of bride and of groom, by type of ceremony performed: Marriage-registration area and each registration State, 1963-----	1-15
1-15. Percentage distribution of all marriages, first marriages, and remarriages of bride and of groom by age at marriage, and median age: Total of 22 selected States, 1954-63-----	1-16
1-16. Marriages by marriage order, age, and color of bride and of groom: Marriage-registration area, 1963----	1-17
1-17. Remarriages by age, previous marital status, and color of bride and of groom: Marriage-registration area, 1963-----	1-18
1-18. Marriages by marriage order and age of bride and of groom: Each marriage-registration State, 1963----	1-19
1-19. Marriages by age of bride, by age of groom: Marriage-registration area, 1963-----	1-22
1-20. First marriages of both bride and groom, by age of bride, by age of groom: Marriage-registration area, 1963-----	1-23

Table	Page
1-21. Marriages by age and previous marital status of bride, by age of groom (all grooms and single grooms): Marriage-registration area, 1963-----	1-24
1-22. Marriages by age and previous marital status of groom, by age of bride (all brides and single brides): Marriage-registration area, 1963-----	1-25
1-23. Marriages by age of widowed and divorced brides, by age of widowed and divorced grooms: Marriage- registration area, 1963-----	1-26
1-24. Marriages by age of white bride and groom and by age of nonwhite bride and groom: Marriage-registration area, 1963-----	1-27
1-25. Marriages by previous marital status and color of bride and of groom: Marriage-registration area and each registration State, 1963-----	1-28
1-26. Marriages by number of this marriage of bride and of groom: Marriage-registration area and each registration State, 1963-----	1-30
1-27. Marriages by previous marital status of white and nonwhite brides and grooms: Marriage-registration area, 1963-----	1-31
1-28. Marriages by marriage order and age of bride and of groom, by month marriage performed: Marriage- registration area, 1963-----	1-32
1-29. Marriages by marriage order and color of bride and of groom, by month marriage performed: Marriage- registration area, 1963-----	1-33
1-30. Marriages by day of week marriage performed: Marriage-registration area and each registration State, 1963-----	1-34
1-31. Marriages by resident status of bride and of groom in State where married: Marriage-registration area and each registration State, 1963-----	1-35
1-32. Marriages by marriage order and age of bride and of groom, by resident status of bride and of groom in State where married: Marriage-registration area, 1963-----	1-36
1-33. Marriages by marriage order and age of bride and of groom, by resident status in State where married: Marriage-registration area, 1963-----	1-38
1-34. Marriages by marriage order of bride and of groom, by nativity status in State where married: Marriage-registration area and each registration State, 1963-----	1-39
1-35. Marriages by marriage order, resident status, and nativity status of bride and of groom in State where married: Marriage-registration area, 1963-----	1-43
1-36. Marriages by nativity status and resident status in State where married: Each marriage-registration State, 1963-----	1-44
1-37. Marriages by age of bride and of groom, by previous marital status and type of ceremony performed: Marriage-registration area, 1963-----	1-51
1-38. Marriages by marriage order of bride and of groom and type of ceremony performed: Marriage- registration area and each registration State, 1963-----	1-52
1-39. Marriages by previous marital status of bride and of groom, by resident status in State where married, by type of ceremony: Marriage-registration area and each registration State, 1963-----	1-54
1-40. Marriages: United States, each State and county, 1963-----	1-63

Sampling Variability of the Marriage Statistics

In the tables which present statistics based on data from probability samples of marriage records, small frequencies have high sampling variability, which limits their usefulness. The sampling errors are shown in table 4-7 in the Technical Appendix. It is suggested that any number smaller than those shown below be interpreted simply as "small" rather than as any more precise value. The true number would very probably be within 60 percent of the figure shown in the table.

	<i>Minimum useful figure</i>		<i>Minimum useful figure</i>
Marriage-registration area-----	175	Michigan-----	275

SECTION 1 - MARRIAGES

Table 1-3. Estimated Number of Marriages and Marriage Rates by Month, With and Without Seasonal Adjustments: United States, 1954-63

(Refers only to marriages occurring within the United States. Alaska included beginning 1959, and Hawaii, 1960. Unadjusted estimates revised for 1954-59. Rates on an annual basis per 1,000 estimated population residing in areas for specified month. The number and rates of marriages by month adjusted for seasonal variation are the figures that would have occurred during the month if the characteristic seasonal pattern of marriages observed during the years 1954-63 had been eliminated)

SECTION 1 - MARRIAGES

1-9

Table 1-6. Marriage Rates by Previous Marital Status and Age: Marriage-Registration Area, 1963

(By place of occurrence. Based on sample data. For frequencies, see tables 1-18 and 1-17; for population bases, see table 4-14, Section 4. Rates per 1,000 population in specified group, estimated as of July 1. Rates for all marriages are based on unmarried population, those for first marriages are based on single population, and those for remarriages are based on widowed and divorced population. Figures for widowed and divorced, but not for all remarriages, include estimates for Louisiana and exclude data for Michigan and Ohio. All marriages include previous marital status not stated; all remarriages include widowed or divorced not stated. Figures for age not stated are distributed)

¹Figures exclude data for Kentucky and Ohio.²This State did not require reporting of type of ceremony.³Civil ceremonies are not provided for in the laws of Maryland.

SECTION 1 - MARRIAGES

Table 1-15. Percentage Distribution of All Marriages, First Marriages, and Remarriages of Bride and of Groom by Age at Marriage, and Median Age: Total of 22 Selected States, 1954-63

(By place of occurrence. Selected States are Alabama, Alaska, Connecticut, Delaware, Georgia, Hawaii, Idaho, Iowa, Kansas, Maine, Maryland, Michigan, Montana, New Hampshire, New York (excl. New York City), Oregon, South Dakota, Tennessee, Utah, Vermont, Virginia, and Wyoming. For 1954-59, basic data are counts of marriages supplied by each State. For 1960-63, data are based on samples. Figures for age not stated are distributed. Figures for all marriages include marriage order not stated)

¹Data are estimated.²Districts shown were county equivalents prior to 1960 (then named "Judicial Divisions"). Data are not available for election districts, the nearest equivalents to counties beginning with 1960.³Marriage licenses issued.⁴Data are estimated from reports for 10 months.⁵Marriages by county where license was issued.⁶Divisions are parishes.⁷Independent cities have the same status as counties and are listed after counties.⁸Independent city formed January 1, 1965, by consolidating Norfolk County and the independent city of South Norfolk.⁹Princess Anne County consolidated with this independent city January 1, 1965.

Section 2. Divorces

Table	Page
2-1. Estimated number of divorces and annulments and rates, with percent changes from preceding year: United States, 1920-63 -----	2-5
2-2. Divorces and annulments and rates: United States, each region, division, and State, 1959-63 -----	2-6
2-3. Reported annulments: United States, each region, division, and State, 1959-63-----	2-7
2-4. Median ages of divorced husband and wife at time of decree and at time of marriage: Divorce-registration area and each registration State, 1963 -----	2-8
2-5. Percentage distribution of divorces and annulments by duration of marriage: Divorce-registration area and each registration State, 1963 -----	2-8
2-6. Estimated number of children involved in divorces and annulments: Divorce-registration area and each registration State, 1963 -----	2-9
2-7. Estimated number of children involved in divorces and annulments: United States, 1953-63-----	2-9
2-8. Median duration of marriage prior to divorce or annulment: Divorce-registration area and each registration State, 1963 -----	2-9
2-9. Percentage distribution of divorces and annulments by number of children reported: Divorce-registration area and each registration State, 1963 -----	2-10
2-10. Divorces and annulments by place where marriage was performed: Divorce-registration area and each registration State, 1963 -----	2-10
2-11. Divorces and annulments by resident status of defendant husband and wife in State where decree was granted: Divorce-registration area and each registration State, 1963-----	2-11
2-12. Divorces and annulments by age of husband and of wife at time of decree: Divorce-registration area and each registration State, 1963 -----	2-12
2-13. Divorces and annulments by age of husband and of wife at marriage: Divorce-registration area and each registration State, 1963 -----	2-13
2-14. Divorces and annulments by race of husband and of wife: Divorce-registration area and each registration State, 1963 -----	2-14
2-15. Divorces and annulments by color of husband by color of wife: Divorce-registration area, 1963 -----	2-14
2-16. Divorces and annulments by number of this marriage of husband and of wife at time of decree: Divorce-registration area and each registration State, 1963-----	2-15
2-17. Divorces and annulments by duration of marriage: Divorce-registration area and each registration State, 1963 -----	2-15
2-18. Divorces and annulments by number of children reported: Divorce-registration area and each registration State, 1963 -----	2-16
2-19. Divorces and annulments by duration of marriage and number of children reported: Divorce-registration area and each registration State, 1963 -----	2-17
2-20. Divorces and annulments by month marriage performed: Divorce-registration area and each registration State, 1963 -----	2-18
2-21. Divorces and annulments by most specific legal grounds for decree: Divorce-registration area and each registration State, 1963 -----	2-19
2-22. All legal grounds mentioned in divorce or annulment decrees: Divorce-registration area and each registration State, 1963-----	2-19
2-23. Divorces and annulments by party to whom decree was granted, whether plaintiff or other: Divorce-registration area and each registration State, 1963-----	2-20
2-24. Divorces and annulments by plaintiff and duration of marriage: Divorce-registration area and each registration State, 1963-----	2-21
2-25. Divorces and annulments: United States, each State and county, 1963 -----	2-23

Sampling Variability of the Divorce Statistics

In the tables which present statistics based on data from probability samples of divorce records, small frequencies have high sampling variability, which limits their usefulness. The sampling errors are shown in table 4-8 in the Technical Appendix. It is suggested that any number smaller than those shown below be interpreted simply as "small" rather than as any more precise value. The true number would very probably be within 60 percent of the figure shown in the table.

	<i>Minimum useful figure</i>		<i>Minimum useful figure</i>
Divorce-registration area-----	100	Nebraska-----	15

3-11. Divorces and annulments by specified characteristics: Virgin Islands, 1963-----	3-8
3-12. Divorces and annulments by specified characteristics of husband and of wife: Virgin Islands, 1963-----	3-8
3-13. Divorces and annulments by resident status of defendant husband and wife: Virgin Islands, 1963-----	3-8
3-14. Divorces and annulments by duration of marriage and number of children under 18 years of age: Virgin Islands, 1963-----	3-9
3-15. Divorces and annulments by party to whom decree granted whether plaintiff or other: Virgin Islands, 1963-----	3-9
3-16. Divorces and annulments by duration of marriage and plaintiff: Virgin Islands, 1963-----	3-9

NOTES

Reporting areas

Marriage data are shown for both Puerto Rico and the Virgin Islands. Divorce totals are shown for both Puerto Rico and the Virgin Islands and detailed divorce statistics for the Virgin Islands only.

Geographic classification

Data are shown by place of occurrence. Totals are shown for the local areas St. Croix Island and St. John and St. Thomas Islands (the latter two combined) in the Virgin Islands and for the primary geographic subdivisions, "municipios," in Puerto Rico. Courts empowered to grant divorces are located only in a few municipios in Puerto Rico; residents of other municipios obtain divorces in these courts.

Race and color

For 1963, brides and grooms are not shown by color for either Puerto Rico or the Virgin Islands. Husbands and wives divorced in 1963 are classified as white or nonwhite for the Virgin Islands.

Section 4—the Technical Appendix—includes information about the sample specifications, sampling errors, and completeness of reporting for these statistics from Puerto Rico and the Virgin Islands.

SECTION 3 - PUERTO RICO AND VIRGIN ISLANDS

Table 3-1. Marriages, Divorces, and Rates: Puerto Rico and Virgin Islands, 1940-63

(By place of occurrence. Rates per 1,000 total population in each area except as noted, enumerated as of April 1 for 1940, 1950, and 1960 and estimated as of July 1 for all other years)

SECTION 4. TECHNICAL APPENDIX

INTRODUCTION

In 1963, two methods were used to collect statistics on marriages and divorces or annulments. Total numbers of marriages and divorces for States and counties are complete counts provided by State and local officials in all parts of the United States. Data on the characteristics of these events and the persons involved in them, however, are based on samples of marriage and divorce records from the marriage- and divorce-registration areas. Marriage totals by month of occurrence were secured by both methods. Sources of marriage and divorce data since 1867 are shown in table 4-1; a description of these sources can be found in Section 7, Volume III, of *Vital Statistics of the United States, 1960*.

Marriage- and divorce-registration areas

In order to promote regular, timely, and complete reporting, marriage- and divorce-registration areas similar to those developed for the collection of natality and mortality statistics were established in 1957 and 1958, respectively. The areas consist of those States and independent registration areas that meet the following criteria:

1. Central files of marriage or divorce records
2. A statistical report form that includes items conforming closely to those on the Standard Record of Marriage (fig. 4-1) or Standard Record of Divorce or Annulment (fig. 4-2)
3. Regular and timely reporting by all local areas
4. Agreement on tests of marriage or divorce registration completeness and accuracy, carried out in cooperation with the National Center for Health Statistics (NCHS)

Table 4-2 shows when central files were established and when the States and independent areas began participating in the registration areas. Figures 4-3 and 4-4 indicate the areas participating in the marriage-registration area (MRA) and the divorce-registration area (DRA) in 1963 as well as those maintaining central files of records of marriage and of divorce or annulment but not in the registration areas. In 1963, 35 States were in the MRA, the same number as in 1961 and 1962, and 22 in the DRA, Rhode Island having been added; in addition, the District of Columbia, New Orleans, and Puerto Rico were included in the MRA and the Virgin Islands in both the MRA and DRA. In 1963, marriages in the MRA represented 62.5 percent of the national total, about the same percent as in 1962; comparable percentages for the DRA are 35.7 for 1963 and 35.6 for 1962.

Statistics based on information from records

In 1960 a probability sample program was initiated for collecting marriage and divorce statistics; for earlier years they were compiled from predesigned tables submitted by the States. The processing of data from samples of records was continued in 1961-63 but with four principal modifications:

1. In 1963 the sizes of both the marriage and divorce samples of records from the registration areas were more than double those for 1960-62. This was accomplished, continuing substantially the same sample design, by increasing the minimum sample sizes for each State—and the sampling rates accordingly—to the figures presented in the discussion of sample design and in tables 4-5 and 4-6. These expansions resulted in reductions in sampling errors of frequencies for the registration areas in the range of about one-fourth up to one-half.
2. For 1963, copies of all marriage records, except for a sample selected and reported for New York, and of all divorce records from the registration areas were inspected and sampled in the National Center for Health Statistics. This resulted in more centralized controls over sampling procedures and specifications and in more detailed information about the types of nonsampling errors described in a later section of this appendix.
3. The 1961, 1962, and 1963 programs were limited to samples obtained from the MRA and DRA, whereas the 1960 program was nationwide and consisted of samples from the MRA, the DRA, and the remainder of the Nation. Hence the national and regional statistics estimated for 1960 are not available for subsequent years.
4. Indiana, Massachusetts, and the District of Columbia were admitted to the MRA and Michigan and Missouri to the DRA in 1961. Ohio and Rhode Island were added to the DRA in 1962 and 1963, respectively.

The statistical tables for 1963 follow approximately the same design as those for 1962. The organization of the volume remains virtually unchanged. All tables of marriage statistics except those for Puerto Rico and the Virgin Islands are included in Section 1, all tables of divorce statistics except those for Puerto Rico and the Virgin Islands are in Section 2, tables of both kinds of statistics for Puerto Rico and the Virgin Islands are in Section 3, and Section 4 is the Technical Appendix.

State and county totals

The complete counts of marriages and divorces and annulments for States and counties are published in tables 1-40 and 2-25 and State totals in tables 1-4, 2-2, and 2-3. Marriage and divorce totals by local areas for Puerto Rico and the Virgin Islands are published in table 3-2. Marriage totals by month of occurrence are shown for all States in table 1-5. The State and area totals shown in these tables differ slightly from estimated totals based on the samples for the same States shown in all other tables in this report.

County totals of marriages reported from 43 States and the District of Columbia were based on data available in central files. In the seven States and New York City lacking central files, surveys were conducted. This was done by State officials in Arizona, Nevada, New Mexico, Oklahoma, Texas, and Washington and by the city clerk in New York

City. Colorado county officials reported totals to NCHS on a monthly basis.

Annual marriage totals were obtained for 3,106 counties or equivalent areas of the United States. The annual marriage total for the United States is the sum of these figures. No figures were obtained for 7 counties.

The number of marriages performed was reported for 46 States. The number of marriage licenses issued was reported for Colorado, Kentucky, Nevada, Washington, and the District of Columbia as well as for 10 counties in Texas. The number of marriage licenses is usually larger by 1 or 2 percent than the number of marriages performed. (See page 2-1, Section 2, Volume I, *Vital Statistics of the United States, 1959.*)

In 1963, total counts of divorces and annulments were received from State officials of the 50 States and the District of Columbia (table 2-25); data for some counties of Kentucky

and New Mexico and for some parishes of Louisiana were obtained from surveys of local officials conducted by NCHS. In 10 States which did not maintain central files of divorce records (Arizona, Colorado, Indiana, Minnesota, Nevada, New Mexico, Oklahoma, Texas, Washington, and West Virginia), State officials conducted special surveys to obtain county totals. The annual divorce and annulment totals thus obtained cover 3,080 counties or equivalent local areas of the United States; no totals were obtained for 33 counties.

The total number of divorces and annulments granted in the United States in 1963 was prepared from the State totals; an estimate for the nonreporting parishes of Louisiana was included in the national figure. This estimate was based on the assumption that the divorce rate in the non-reporting areas of the State was identical with that for the reporting areas.

Detailed characteristics

All variables included in the 1963 tabulations are taken from the marriage and divorce or annulment record forms of all the registration States with the few exceptions indicated in tables 4-3 and 4-4.

In table 4-3, the column headed "City or town" of marriage was deleted for 1963 and another column providing information on the State of birth was added. Of the 35 States participating in the marriage-registration area in 1963, 27 specified the county where the marriage was performed. In five of the remaining States, cities and towns are minor civil divisions directly below the county level. In this respect, they are the equivalent of townships in many other States.

divorce-registration areas each of the groups of States with a uniform sampling rate was treated as a stratum. Estimated sampling errors shown for the MRA and the DRA using these groups of States as strata are likely to be somewhat larger than those that might have been computed using each State as a stratum.

DEVELOPMENT OF THE STATISTICS

Source of the records

The selection of sample records and payments to be made by NCHS were arranged for each reporting area. For marriages, the records to be sampled referred to all marriages performed within the 35 States and the District of Columbia which composed the MRA during 1963, irrespective of the date of issue of the license or registration of the marriage. Sampling procedures followed in individual States were also followed in Puerto Rico and the Virgin Islands; data for these areas are published in Section 3 of this volume. For divorces, the records to be sampled referred to all decrees of absolute divorce and of annulment that were granted during 1963 within the 22 States which compose the DRA. Data from Rhode Island were included for the first time. Reports of these events were also received from the Virgin Islands and are published in Section 3. In States where interlocutory divorce decrees are granted, those granted late in the year 1963 became final in 1964 and those granted late in 1962 became final in 1963. It is possible that some interlocutory decrees never become final because of death or reconciliation, but it is believed that the number of such cases is small. In all these States except Utah divorce records are filed in the State office of vital statistics when interlocutory decrees are granted and not when they become final. For this reason, Utah divorces are included in the sample by year when they became final. In most cases, interlocutory divorces become final automatically after the lapse of a certain period of time.

Variables tabulated

From the marriage records of States in the MRA, the following variables were tabulated: month of marriage, age, color, marital status, number of this marriage, county and State of residence of bride and of groom, and type of ceremony performed. The basic items for divorce were age, color, number of this marriage, residence of the defendant, place and duration of the marriage, and the number of children in the family being dissolved. Legal items classifying the party who was the plaintiff, the person to whom the decree was granted, and the legal grounds for the decree were also tabulated.

Arrangement of the tables

The overall order and the content of the tables of marriage and divorce statistics resemble those for 1962.

Marriage statistics (Section 1) are presented in three principal groups of tables. Tables 1-1 through 1-5 and the last table, 1-40, include the statistics compiled from counts

of certificates reported by States and local areas. These data are available for the entire Nation. In tables 1-6 through 1-15 statistical estimates (rates, medians, percentages, etc.) which have been derived from the frequencies shown in later tables are presented.

In the last and largest group of tables, 1-16 through 1-39, the frequency distributions shown are estimated from the samples of marriage certificates processed in NCHS. The arrangement of these tables has been revised since 1962. Distributions of brides and grooms by the basic variables of age, whether or not previously married, marital status before marriage, number of the reported marriage, and color are grouped in tables 1-16 through 1-27. In five of these, tables 1-19 through 1-23, a systematic presentation of age and marital status as factors in the selection of marriage partners is featured by presenting cross-classifications of these characteristics of brides by those of their grooms. Tables 1-28, 1-29, and 1-30 show distributions in the time (month and day of week) of the marriages. The following six tables, 1-31 through 1-36, include the statistics which provide some information about two types of migration of the brides and grooms—whether or not they migrated from their States of residence to other States to marry and whether or not their States of residence and of marriage differed from their native States. The data on nativity status were not tabulated in 1960-62. In tables 1-37 through 1-39 data are presented on age and other characteristics of brides and grooms who were married in civil and in religious ceremonies.

The principal statistical estimates and tabulations added to the published data since 1962 are (1) marriage rates specific by age and previous marital status (table 1-6), (2) interquartile age ranges for brides and grooms of each previous marital status (table 1-7), and (3) five tables of additional data on the nativity and resident statuses of brides and grooms in the States where they were married (1-33 through 1-36 and 1-39).

The tables for divorce follow the same general outline used in the 1962 volume. As the proportion of records included in the sample was higher in 1963 than in 1962 a more detailed breakdown of the data was possible in most tables. One significant change is the inclusion of tables on divorces by color of husband cross-tabulated by color of wife, divorces by month the marriage was performed, and divorces by all legal grounds mentioned in the decree.

Divorce tabulations feature detailed analyses of variation in duration of the marriage dissolved and in number of children involved. These are critical variables—the first as an index of marital and family stability and the second as a part of an estimate of the number of persons affected by the dissolutions of these marriages.

Tabulation of grounds for divorce

Detailed tabulations were prepared for 1963 on legal grounds for decree. As about 12 percent of the decrees were granted on two or more legal grounds, two tables showing this variable are published. Table 2-22 shows the distribution of all legal grounds mentioned; in this table the sum of all frequencies for a State is larger than the number of di-

voices. In table 2-21, decrees with multiple grounds are classified to the most specific ground as follows:

1. "Adultery" includes all cases where this ground was mentioned, irrespective of other grounds.
2. "Bigamy or fraud" includes all cases where either or both of these two grounds were mentioned, irrespective of other grounds.
3. "Conviction of crime" includes all cases where this ground was mentioned, irrespective of other grounds.
4. "Drunkenness" includes all cases where this ground was mentioned, irrespective of other grounds.
5. "Desertion or abandonment" includes cases where either or both of these grounds were mentioned, except those included in categories 1 through 4.
6. "Neglect or nonsupport" includes cases where nonsupport, gross neglect, neglect of duty, and failure to provide are mentioned separately or in any combination, except those included in categories 1 through 5.
7. "Cruelty" includes cases where this ground is mentioned, except those included in categories 1 through 6.
8. "Indignities" includes cases where this ground was mentioned, except those included in categories 1 through 7.
9. "Incompatibility" includes cases where this ground was mentioned, except those included in categories 1 through 8.
10. "Other" includes cases with legal grounds not covered in categories 1 through 9.

As no decree was granted on combinations of the four grounds adultery, bigamy and fraud, conviction of crime, and drunkenness, categories 1, 2, 3, and 4 are mutually exclusive.

Estimating procedures

Area totals.—Before data were tabulated and statistics estimated, adjustments were made in order to reconcile totals estimated from samples received with pretabulated counts for each reporting area. The procedures were as follows:

For marriages, as in previous years, no adjustment was made for a State in which the complete count and the sample estimate differed by 1 percent or less. A difference of more than 1 percent was found for the District of Columbia, Kentucky, Massachusetts, and Puerto Rico. None of these discrepancies exceeded 4 percent. In two cases, Massachusetts and Puerto Rico, the published totals are based on samples taken from microfilmed records reported to the National Center for Health Statistics. In the other two cases the reported totals were counts of marriage licenses issued and are published as reported, but the totals estimated from samples of marriages occurring in 1963 are published in all tables based on sample data.

For divorces, adjustments were made if the pretabulated count for a reporting State differed from the estimated total based on the sample by more than 1 percent. It was found that the sample from one State, Utah, was short 352 records, representing 704 events, less than 1 percent of the divorce

total of 152,594 for all registration States combined. In all detailed divorce tables the number of not stated cases was increased for this State in order to bring its total up to figures representing complete samples.

Frequencies.—Procedures for estimating frequency distributions for various characteristics were similar for the marriage and divorce samples. Frequencies were estimated in two steps:

1. Each sample case, and all items tabulated for that case, was assigned a weight which was the reciprocal of the probability (or sampling ratio) used to select the case. Thus if a marriage record was selected from a State with a probability of 1/10, each item on that record was multiplied by 10, whereas if 100 percent of the records were processed from a State, each item on each such record was multiplied by 1.
2. Frequencies were estimated by summing the inflated numbers of cases instead of tabulating the number of sample cases. Thus each frequency distribution, such as age at marriage of first-married brides, is a sum of the weighted sample cases included.

It should be noted that the weights for all sample records are identical within each registration-area State. However, as shown in tables 4-5 and 4-6, the weights for individual MRA States vary from 1 to 40 and those for the DRA States vary from 1 to 20. Therefore, insofar as any given subtotal is composed of unique proportions of weighted cases from the various States, the sampling error for each subtotal will be unique. This means that any two approximately equal subtotals may have different sampling errors.

Percents and rates.—Percents in the analytical tables were computed from data excluding numbers of not stated cases. All rates appearing in the analytical tables were based on populations from the U.S. Bureau of the Census. These are populations estimated as of July 1, 1963, present in the area and including Armed Forces stationed in the area but excluding Armed Forces abroad.

Values were allocated to cases of "not stated" on marriage statistics for age of bride and of groom and month and day of week of the marriage. All of these variables have been reported since 1960 with 99 percent or more completeness on samples of records from the MRA. Procedures for allocating age are shown below.

1. In case only the age of one partner was reported, the age of the other was allocated as follows:
 - Allocated age of groom = 1.14 (age of bride) - 0.35
 - Allocated age of bride = 0.88 (age of groom) + 0.31
 If month of marriage was not stated, it was allocated by assigning months in sequence to each such case—for example June, July . . . December, January If date of marriage was not stated, it was allocated by assigning in sequence the numbers 1, 2, 3 . . . 28, 1, 2, 3
2. If the ages of both partners were not stated, ages allocated to each were those of the last preceding couple in the run of sample records. Because of the difference between ages of widowed and other brides and grooms the following restriction was placed on this procedure.

If neither person in the couple with ages not reported was widowed, ages were allocated from the last preceding couple in which neither partner was widowed; if one or both partners were widowed, ages were allocated from the last preceding couple in which both were widowed. In cases of runs of more than five of either type of couple with age not stated prespecified ages were substituted until another case with reported ages became available. There were 261 sample cases (0.2 percent) in which age of both bride and groom was not stated.

Children involved in divorces.—Procedures for estimating the number of children reported in divorce suits presented a special problem. The number of children was estimated for each registration State, the DRA, and the United States. In order to obtain a State total, the category "children not stated" was first distributed in accordance with the distribution of divorces by number of children reported. Then the number of divorces in each category with a given number of children was multiplied by the number of children per divorce (that is, the number of divorces involving one child was multiplied by 1, the number involving two children was multiplied by 2, etc.). The sum of the products is the estimate of the number of children of divorced parents in a given registration State, and the sum of State estimates for participating States is the estimate for the DRA. The national estimate was obtained by multiplying the combined estimates for 14 of the DRA States by the ratio of the 1960 national estimate of children based on the nationwide sample and the comparable figure for the 14 States combined. The ratio is 5.40039, and the 14 States are Georgia, Idaho, Iowa, Kansas, Maryland, Montana, Nebraska, Oregon, Pennsylvania, South Dakota, Tennessee, Virginia, Wisconsin, and Wyoming.

SAMPLING ERRORS

Each estimate computed from samples, except statistics for States where the sample includes all records, has a sampling error (σ). Since all cases in these samples were selected with known probabilities, this sampling error can be computed, for each estimate. Each sampling error shown in tables 4-7 and 4-8 is the amount which, when added to and subtracted from the estimated frequency or percent, gives the interval within which the actual quantity being estimated would lie in approximately two out of three samples of equal size. For example, if the sample estimate of the number of wives under 20 years of age at the time of divorce in 1963 is 15,000, and if the sampling error for this estimate is 320, the probability is about 2/3 that this sample estimate is within 320 of the true total and about 95/100 that this estimate is within two sampling errors (640) of the true total.

In order to facilitate comparisons of sampling errors between registration States with widely varying totals of marriages or divorces, the sampling errors are shown for frequencies expressed as percents of State or registration area totals. The sampling error for the estimated percent corresponding to each frequency can be computed by dividing the sampling error shown for the frequency by the total number of events reported for the area. As an example of the procedures described above for the States and registra-

tion areas, suppose the number of nonwhite marriages in California to be 12,068, or 10 percent of the total for the State. The error shown in table 4-7 for this frequency is 651. By adding and subtracting 651 from 12,068, we obtain the interval 11,417 to 12,719; the chances are about 68 out of 100 that the actual number of nonwhite marriages is in this interval. In order to obtain the sampling error for 10 percent itself, divide 651 by the State total, 120,680, with a resulting sampling error of 0.5 percent. Thus the chances are about 68 out of 100 that the actual percent of nonwhite marriages in California falls between 9.5 and 10.5.

The standard error of a proportion in a subgroup of a subtotal—say, the proportion of nonwhite marriages in the age group 15-19 years—may be estimated from the formula

$$S_p = \frac{\sqrt{P_y^2 S_x^2 - P_x^2 S_y^2}}{P_y^2 N}$$

P_y is the proportion the denominator is of the total marriages of the State. P_x is the proportion the numerator is of the State total. S_y is the standard error of the denominator, and S_x is the standard error of the numerator. N is the total number of marriages for the State. Use of this equation can be best illustrated by an example. Suppose for the State of Alabama that 40 percent of the marriages of nonwhite brides from the sample fell into the age group 15-19 years and we want to approximate the standard error of this proportion. Suppose also that the estimated number of nonwhite marriages for the entire State was 9,000 and that the number falling into the age group 15-19 years was 3,600. Nine thousand marriages is close to 25 percent (P_y), and 3,600 is close to 10 percent (P_x) of the 35,520 (N) marriages in Alabama during 1963. From table 4-7 we find that for Alabama the standard error of 9,000 is 245 (S_y) and of 3,600 is 170 (S_x). Substituting these values into the formula we obtain

$$S_p = \frac{\sqrt{(.25)^2 (170)^2 - (.10)^2 (245)^2}}{(.25)^2 (35,520)} = .016$$

Therefore the chances are about 68 in 100 that the true proportion is between .384 and .416.

To determine if two proportions are significantly different, divide the difference by the square root of the sum of the squares of their standard errors. If the quotient of this division is greater than 2, then the probability that the difference is due to chance is less than 1 in 20.¹ (The figure 2 is the rounded value of "Student's" t at the 5-percent level of significance for the hypothesis that the difference between the two estimates is zero when samples are large, i.e., containing about 60 or more cases.) To illustrate, suppose we wish to compare the proportion of nonwhite marriages in the 15-19 age group for the two States of Alabama

¹Helen M. Walker and Joseph Lev: *Statistical Inference*. New York, Holt, Rinehart and Winston, 1953. pp. 154-157.

and Louisiana. Assume that the proportions were 0.40 with standard error .016 for Alabama and 0.44 with standard error .019 for Louisiana. Division of the difference by the square root of the sum of the squares of the standard errors gives us

$$\frac{(.44 - .40)}{\sqrt{(.016)^2 + (.019)^2}} = 1.6$$

This value is less than 2; therefore the difference between the two proportions may well have been due to chance.

COMPLETENESS OF THE DATA AND TYPES OF NONSAMPLING ERRORS

Estimates of the 1963 marriage and divorce statistics would vary if the records were sampled repeatedly. This variation, described above, is error due to sampling. There are several other sources of variation from accuracy in statistics, most of which are little affected by the size or design of the sample. For example, items may be missing from reporting forms and hence are not reportable; items, though appearing on a form, may be vague and ambiguous or may elicit responses which are specific but not codeable for the statistical tabulations in this volume; or data may be submitted on outdated record forms.

Types of nonsampling errors

In the first part of this presentation several sources of nonsampling errors are classified and described. The immediate sources of the errors are the principal bases for the classifications. These errors arise from lack of responses to items on reporting forms, from variations in items requested on the forms, from inadequate coding or tabulating instructions, and so forth.

Responses not completed.—Errors arise from failure to complete an item requested on a certificate or from illegibility of a recorded response. Also included are responses to all items on the records which were not reported. Percentages shown in tables 4-9 and 4-10 represent such responses (not completed) for the marriage- and divorce-registration areas. For individual States the percentages shown also represent estimates of missing responses, except for those figures footnoted as not reportable.

The small proportions of not completed responses on the marriage records for month and day of marriage and for age were allocated to known observations by methods previously explained in this appendix.

Not reportable data.—There are two sources of nonreportability of data. First, because of variations in the record forms on which marriage and divorce statistics are reported, coverage for some variables is not complete for the marriage- or divorce-registration area. If an item—say, color—did not appear on the form in regular use in a State for reporting marriage or divorce statistics in 1963, all responses on that item are classified as not reportable. Second,

if certain categories of a variable, such as marital status, could not be distinguished because of the wording of an item on a record form, only these categories were classified as not reportable. For example, for a few States information about whether or not the bride and groom had been previously married was reported but data on the number of marriages of previously married persons was not, since the item on the form did not specify that the latter should be stated.

The percentages of not stated cases classified as not reportable in tables 4-9 and 4-10 are based on estimates of incomplete coverage from both sources. Footnotes to entries under each variable identify the specific reporting areas for which each item was not reportable.

In a few cases an item was not reportable on part of the records submitted by a State because outdated reporting forms which did not include the item were among the records received. Numbers of such cases were small and scattered. They are included with the not completed group with one exception—two forms used by several local offices in one State did not provide for reporting data by which widowed and divorced marital statuses could be classified. It was decided not to code these marital statuses for marriages reported from this State.

Inconsistent, inappropriate, and other irregular responses.—Some nonsampling errors apply to responses made to items and to other entries on individual records. Response errors other than missing or illegible responses were of several kinds. One of the most frequent was that the reported marital status prior to this marriage was not consistent with the reported number of the marriage. Other illustrations of such responses are (1) age was reported as "21 plus," (2) age was reported in response to an item requesting date of birth, and (3) the date a marriage certificate was signed by the bride and groom, though supposedly the date of the marriage, was occasionally a later date than that on which the marriage was recorded by the local registration official. Age and date of birth, when they are both reported, are not always consistent.

Items not phrased to elicit responses needed for the statistics.—Some of the items as they appear on forms are not presented in a way that elicits the responses needed for obtaining the desired statistics. Three types of errors are included in this category.

First, an item may be subject to different interpretations, only one of which yields adequate responses. For example, an item designated "number of marriage" appears on a few forms. For one of these forms responses obtained from some local offices reported number of previous marriages, while most offices reported the number of the present marriage.

Second, items may not be explicit, but many responses may be adequate because additional verbal instructions clarify the item or conscientious recorders obtain complete information. Several forms do not specify the place names (State, county, etc.) to be recorded when reporting residence. On one such form, both city or town and State names were often recorded but a number of reports carried only city or town names. At first it was assumed that these residences were in the State submitting the records, but sample checks

indicated that this was not uniformly true. Nevertheless, many local recorders had noted the State of residence despite the fact that it was not specifically requested.

Third, items may be specific and explicit, but may not request enough information to permit classification of more complex cases. Data for classifying the marital status before marriage of persons who were previously married are usually obtained from an item asking whether the last marriage ended in death, divorce, or annulment. If this item requests the number of previous marriages ending in each manner, those persons with two or more previous marriages ending in different manners (e.g., one in death and one in divorce) cannot be coded, since the form does not ask which of the marriages was most recent.

Errors in the arrangement of the records.—Errors in the arrangement of the records received on microfilm in NCHS are of two main types. Numbers on the records are out of sequence, missing, or duplicated, or records which are not part of the population being sampled are included in the file. Both of these sources of errors increase the possibilities of inaccurate basic counts of records.

Errors in coding and tabulating the data.—Errors in coding and tabulating probably arise from as many different sources as do reporting errors. Coding instructions may not provide rules for some decisions coders are expected to make, and individual judgments may be substituted. Ambiguities and inconsistencies can also appear in coding instructions. A coder may consistently make "wrong" decisions.

The procedures for coding data in the National Center for Health Statistics included 100-percent verification of coding, and the usual editing of data for impossible codes can be applied to all of the data to reduce errors in classification and tabulation.

Locating and estimating nonsampling errors

A beginning has been made toward estimating the effects of nonsampling errors on the accuracy and reliability of the statistics in this volume.

Since 1960, samples of records of marriages and divorces have been reported to the National Center for Health Statistics. From these samples, estimates have been prepared each year of numbers of not stated cases on each statistical variable for each reporting area.

For these not stated cases two types of nonsampling error were distinguished above as having different sources—"not reportable" error, arising from failure to report because an item did not appear on a reporting form, and "not completed" error, arising from failure to report an item which was requested on the form. Estimates of the number of not stated cases arising from each of these sources indicate in 1963, as they did in 1960-62, that a major proportion of the not stated cases on marriage statistics arise from the absence of items on some of the reporting forms. On the other hand, the majority of not stated items on records of divorce and annulment arise from lack of response to some of the items requested on the reporting forms. This is especially true for personal items about husbands and

wives being divorced, such as age, color, and number of the marriage being ended, in contrast to legal items, such as grounds for granting the decree of divorce.

In 1960 as well as in 1963 estimates were prepared for the registration areas of the number of responses not completed and of cases not reportable for each variable tabulated. The procedures followed in preparing the 1963 estimates published in tables 4-9 and 4-10 were more detailed and explicit than in 1960, chiefly in the coding of residence data. The 1963 changes had the effect of barring guesses by coders; hence they probably acted to increase the number of cases coded as not stated.

Estimates of the number of responses not completed.—Numbers of times responses were not completed were estimated by subtracting the not reportable responses from all responses not stated. This category includes missing and illegible responses and cases of records not received. It also includes a few responses which were called not stated because, though given, they were inappropriate. For example, numbers were written on a few sample records from one State instead of marital statuses (single, widowed, or divorced). Checks of problems as they arose yielded evidence of only scattered instances of such responses.

For the marriage-registration area, the largest proportion of responses not completed was for color of bride and groom (4.3 percent in each case). This is a marked increase over the proportions estimated for 1960 (1.4 percent for brides and 1.1 for grooms). Among other items only State of birth, coded for the first time in 1963, had proportions of not completed responses larger than 3 percent. Among the variables coded in both years, color and resident status in place where married had higher proportions of responses not completed in 1963 than in 1960. None of the responses not completed arose from nonreceipt of records in 1963 (though there were small differences between State totals as reported and as estimated from the sample). In 1960 records not reported made up an estimated 0.4 percent of all marriages in the MRA.

For divorce data from the divorce-registration area, age at decree could not be completed for approximately 46 percent of the husbands and of the wives. Among the States, percentages not completed ranged from less than 1 (in Iowa and Wisconsin) to over 95 percent in two States. In general, items of personal information were less complete than legal items and information about the marriage. One possible explanation for the incompleteness in reporting personal items is that in several States the local court official responsible for reporting the data is not empowered to require completion of the reporting form but can only secure information if it is entered in transcripts of court proceedings on the case. Among the items with the highest percentages completed were (1) whether the plaintiff was the husband, wife, both, or a third party; (2) the month of marriage; (3) duration of marriage; and (4) legal grounds for the decree.

In the case of the divorce records, those which were not received (though counts of the decrees were reported) made up an estimated 26.5 percent of the decrees granted in one State but only 0.5 percent of all decrees granted in the DRA. Items for these divorces were included with not

completed responses. Aside from this instance, discrepancies of totals estimated from the samples and totals counted from record files were minor.

Estimation of data not reportable.—On the marriage records for the marriage-registration area the variable "color" had a high proportion of cases in which the data were not reportable (18.6 percent²); this proportion increased greatly since 1960, when it was 7.8 percent. The increase since 1960 arose primarily from the removal of the item from the California reporting form.

Proportions of not reportable cases were also large (9.5 percent) for items used in distinguishing between civil and religious ceremonies. Most of the remaining nonreporting cases arose from variation in the items from which information about the marital history of previously married brides and grooms was obtained, particularly marital status prior to the current marriage. In areas requesting these data incompleteness of reporting was about 1 percent, thus holding the total proportions not stated to 5-6 percent. Gains in uniformity in the marital history items should be reflected in marked reductions in proportions of not stated cases. The item "State of birth" was missing on only one form; this accounted for less than 1 percent of all cases reported.

In the statistics on divorces and annulments, an item on race or color was missing from only one reporting form, but this accounted for 15.6 percent of all divorces reported for the divorce-registration area. The number of times husband and wife were married was not requested on two forms, and data for classifying residence of the defendant and to whom the decree was granted were each missing from one form.

In summary, the item for which reportability (i.e., coverage) within both registration areas is least complete is race or color. Reportability for items about previous marriages is also inadequate and, in the case of marriages, could be improved through the adoption of items which are comparable to those appearing in the recommended standard certificate; the overall completeness would probably increase to 98 percent or more.

Errors in responses reported.—To date, the number of responses in error has not been estimated on each variable. Those that could not be coded are included in the figures for responses not completed. Special sample observations of problems which arose in coding and editing the 1963 data have indicated several specific instances of this source of error and their locations in reporting areas. About one-eighth of the marriage records sampled from one State had codes instead of responses to the item "number of previous marriages"; most of them were from one local office. On scattered records from several areas the previous marital status reported was inconsistent with the number of previous marriages.

Other potential sources for more data on inconsistencies exist in some of the State files of records, in querying pro-

grams, and in legal requirements but have not been analyzed to yield estimates of nonsampling error arising from misreporting. For example, inconsistencies between reported age and date of birth and between the marital history items mentioned above were queried in a few States. In at least one State the feasibility of matching divorce records to the marriage records for couples married and divorced in the same State has been demonstrated; hence any information reported on both records can be compared.

Errors arising from phrasing of items on reporting forms.—Lack of uniformity of items on the various reporting forms and phrasing of items which do not yield kinds of responses needed become clearly evident during coding. Therefore information about these sources of error is much more complete than that about irregularities or inconsistencies in the responses themselves. In spite of this, estimates of the number of errors attributable to these sources are difficult to make. Instructions given to persons reporting data in response to vague or ambiguous items may differ so that adequate responses are given in some but not all cases. Items which were most frequently sources of error were those requesting geographic place names (residence, place of marriage, and place of birth) and those requesting data about previous marriages. Of the 36 marriage reporting forms in use in 1963 (35 MRA States and the District of Columbia) 6 did not specify the geographic areas to be designated when reporting residence and two others did not specify that State was to be reported. Twenty-one requested place names, such as county or, in New England, town, which were subdivisions of States and hence could be used to classify all locations in these States. Four State forms did not designate any geographic names to be reported for the place at which the marriage occurred, and 13 forms did not do so for birth-place. In most cases, State was reported even when not specified, but on records from one State local place names from adjacent States were reported without a State name. County was almost never reported, either for residence or place of marriage, unless specifically requested. Tabulation of this item was dropped in 1962 because of the ambiguities encountered in determining counties from reported names of cities and towns. Variations in phrasing of items requesting data about previous marriages were sources of problems in a few cases and of uncertainty about undetectable variation in interpretations in a few others. Despite variation in phrasing of items requesting marital status the checks during coding and inspection of resulting distributions have not indicated any evident biases in responses other than nonresponse due to items missing from a few forms. However, the explicit request, to previously married persons, for the manner in which the last marriage ended (death, divorce, or annulment) appears on only 12 of the marriage reporting forms.

Variation in the phrasing of items on the 22 divorce reporting forms was less than on those for marriages, though geographic place names were not clearly requested in several cases. State of residence was not explicitly asked for on four forms, and county on nine forms. Address, rather than residence, was requested on seven forms. On eight forms no geographic place names were specified for the place at which the marriage occurred, and on seven forms

²The percentage for 1963 was inflated by 2 or 3 percentage points since New Jersey had partly shifted to a reporting form to which an item for race or color data was restored, but the prior form that lacked the item was still in widespread use.

no such names were specified for place of birth of husband and wife. As in the case of marriages, responses usually mentioned State even if it was not requested. No attempt has been made in the detailed statistics to use data requiring classification of counties.

Errors in arrangement of records submitted.—Errors which were detected are limited to the obvious ones observed in the course of selecting systematic samples. No detailed order of records on microfilm has yet been developed for reporting these records as in the case of birth and death records. In one area permanent files of marriage records were arranged by date of application for the license. Since both the application and license are valid indefinitely, a number of records of marriages occurring in the current year may be found in files for earlier years. A recent check indicates that 4-5 percent of records of the current year's marriages were so filed. Special arrangements to locate and microfilm these records are made each year by the National Center for Health Statistics. In a few other cases relatively small numbers of records of marriages occurring in earlier or later years were interspersed with records for the data year.

From another area several unnumbered records of marriages were submitted and a block of 50 numbers was repeated.

In one State reporting divorces, records were filed by date of receipt instead of date the decree was granted. A considerable number of the previous year's records were found among the current year's records and had to be sampled and added to the previous year's data.

Gross errors of these kinds were few, but they posed obstacles to more prompt publication of the data from all reporting areas.

Errors in coding and tabulating the data.—Errors in coding and tabulating are relatively unimportant. All coding was verified 100 percent; taped data were edited for impossible codes and, where possible, for inconsistencies. In-

stances of impossible codes and inconsistencies in information about previous marriages were rechecked to the records. This editing and rechecking indicated only negligible numbers of coding errors.

DEVELOPMENTS IN MARRIAGE AND DIVORCE PROGRAMS SINCE 1960

Due to the nature of their subject matter, the previous paragraphs have been a distinctly one-sided recital of deficiencies. For most of the data, the completeness and year-to-year consistency of many of the tabulations in this volume are evidence of both the reliability and coverage provided at all levels of the registration systems. The records from all States in the registration areas were first reported to the National Center for Health Statistics in 1960 and data prepared centrally; only samples of the records were reported from many States. The reporting was expanded beginning with 1963 to include 100 percent of the records, and the overall proportion of records included in the sample processed has been more than tripled. Marriage rates specific for age, sex, and previous marital status are being initiated on an annual basis in 1963. States now improving their registration systems preparatory to entering the registration areas are in most cases achieving levels of adequacy of items on reporting forms and of reporting completeness, especially for divorces, that exceed the averages for the States already included.

Table 4-1. Sources of Marriage and Divorce Data: United States, 1867-1963

TIME PERIOD	Marriage	Divorce ¹
1867-86	Estimates prepared by National Office of Vital Statistics based on results of field survey covering 20-year period conducted in 1867-86 by the U.S. Department of Labor.	Numbers and detailed statistics (legal grounds, duration of marriage, number of children reported, etc.) obtained in field survey covering 20-year period conducted in 1867-86 by the U.S. Department of Labor.
1867-1906	Estimates based on data from field survey covering 20-year period conducted in 1906-07 by the U.S. Bureau of the Census.	Numbers and detailed statistics (legal grounds, duration of marriage, number of children reported, etc.) obtained in field survey covering 20-year period conducted in 1906-07 by the U.S. Bureau of the Census.
1907-15	Estimates prepared by Bureau of the Census based on records from selected States.	Same as for marriage.
1916	Numbers collected through mail survey conducted in 1917-18 by Bureau of the Census.	Numbers and detailed statistics collected through mail survey conducted in 1917-18 by Bureau of the Census.
1917-21	Estimates prepared by Bureau of the Census based on records from selected States.	Same as for marriage.
1922-32	Annual collection by Bureau of the Census through mail query to States with central files and to counties in the remaining States.	Numbers and detailed statistics collected annually by Bureau of the Census through mail query to States with central files and to counties in the remaining States.
1933-36	Estimates by S. A. Stouffer and L. M. Spencer on basis of data available from selected States (<i>American Journal of Sociology</i> , January 1939).	Same as for marriage.
1937-40	Estimates based on transcript returns and mail surveys of State and county offices conducted by Bureau of the Census. Some detailed statistics for 1940 based on transcript program.	Same as for marriage.
1941-43	Estimates based on data from published State reports and from files of Bureau of the Census and Federal Home Loan Bank Board.	Same as for marriage.
1944-47	Estimates based on figures for marriages and marriage licenses obtained by National Office of Vital Statistics from State and local registration offices.	Estimates based on figures for divorces and annulments obtained by National Office of Vital Statistics from State and local registration offices.
1948-56	Estimates based on figures for marriages and marriage licenses obtained by National Office of Vital Statistics from State and local registration offices; detailed statistics based on pretabulated data provided by State offices of vital statistics.	Estimates based on figures for divorces and annulments obtained by National Office of Vital Statistics from State and local registration offices; detailed statistics based on pretabulated data provided by State offices of vital statistics.
1957	Estimates based on figures for marriages and marriage licenses obtained by National Office of Vital Statistics from State and local registration offices; detailed statistics based on pretabulated data provided by States participating in the marriage-registration area (MRA).	Same as for 1948-56.
1958-59	Same as for 1957.	Estimates based on figures for divorces and annulments obtained by National Office of Vital Statistics from State and local registration offices; detailed statistics based on pretabulated data provided by States participating in the divorce-registration area (DRA).
1960	Statistics prepared in the National Vital Statistics Division from nationwide probability samples of marriage records designed to provide estimates for the United States, the four regions, the marriage-registration area, and each registration State. Totals of either marriages or marriage licenses by county and by month also tabulated in each State. These and totals estimated from samples were checked for consistency.	Statistics prepared in the National Vital Statistics Division from nationwide probability samples of divorce records. Records in the sample provided statistics on absolute decreases of divorce and annulment for the United States, the four regions, the divorce-registration area, and each registration State. Totals for each State by county also tabulated in each State. These and totals estimated from samples were checked for consistency.
1961-63	Statistics prepared in the National Vital Statistics Division for the MRA and each MRA State from probability samples of the marriage records collected by each MRA State. Pretabulated totals of marriages or marriage licenses by county and by month, reported for all States, used to compute totals for the United States, four regions, and nine geographic divisions; also, for MRA States, checked for consistency with totals estimated from sample records.	Statistics prepared in the National Vital Statistics Division for the DRA and each DRA State from probability samples of the records of absolute divorces and annulments collected by each DRA State. Pretabulated totals by county, reported for all States, used to compute totals for the United States, four regions, and nine geographic divisions; also, for DRA States, checked for consistency with totals estimated from sample records.

¹Includes reported annulments.

Virginia	X	X	X	X	X	(²)	X	(³)	(³)
Wisconsin	X	X	X	X	X	(²)	X	X	X
Wyoming	X	X	X	X	X	(²)	X	X	X

¹Not on Standard Record of Marriage. (Information used in NCHS to distinguish religious from civil ceremonies if type of ceremony not stated.)²Reportable as number of previous marriages.³Item does not specifically request State, but State was reported on most records, and State was allocated only for major cities of residence or of birth.⁴For this State, cities and towns are minor civil divisions directly below the county level. (Towns are equivalents of townships.)⁵Not reportable; requests name but not title of officiant.⁶Reportable as "Number of marriage."⁷Appears on form revised October 1962. Not tabulated because of delay in using revised form.

Table 4-4. Selected Items of Statistical Information on Divorce or Annulment Records of Divorce-Registration States: 1963

(Items listed are those on the Standard Record of Divorce or Annulment, PHS-2040. "X" denotes presence of item on State record form)

STATE	ITEMS CONCERNING DIVORCE						ITEMS CONCERNING MARRIAGE		ITEMS CONCERNING HUSBAND AND WIFE

¹"Not stated" data composed of not reportable (item was not on record of entire reporting area) and not completed (item was on the record but not filled in or the number of records from a reporting area was incomplete).
²Puerto Rico and Virgin Islands excluded.
³Not reportable.
⁴Not reportable for remarriages in four registration States. For these States, total marriages include the following percentages of remarriages: Idaho, 31.4 percent of brides, 28.9 percent of grooms; Kansas, 21.9 percent of brides, 20.5 percent of grooms; Maryland, 23.1 percent of brides, 22.7 percent of grooms; Oregon, 22.0 percent of brides, 21.9 percent of grooms.
⁵Not reportable for remarriages in three registration States. For these States, total marriages include the following percentages of remarriages: Louisiana, 17.9 percent of brides, 16.1 percent of grooms; Michigan, 25.0 percent of brides, 23.8 percent of grooms; Ohio, 24.3 percent of brides, 24.6 percent of grooms.
⁶Civil ceremonies not provided for in the laws of Maryland.
⁷Not tabulated because reporting was incomplete.
⁸Not tabulated because data were not comparable.
⁹Not tabulated; see Technical Appendix.

Table 4-10. Percent of Divorces and Annulments "Not Stated" for Specific Characteristics: Divorce-Registration Area, Each Registration State, and Virgin Islands, 1963
(By place of occurrence. Based on sample data)

AREA	All divorces and annulments	Resident status of defendant	CHARACTERISTIC														
			Age				Race or color		Number of this marriage		Place of marriage	Month of marriage	Duration of marriage	Number of children reported	Legal grounds for decree	Plaintiff	To whom decree granted
			At decree		At marriage		Husband	Wife	Husband	Wife
